

Statement on Conflict Minerals

Dear Customer,

In our commitment to embed ethical practices and transparency in our business operations, we wish to inform you about our efforts in managing conflict minerals. This initiative aligns with the "Dodd-Frank Wall Street Reform and Consumer Protection Act" implemented by the SEC, which requires companies to disclose the origin of certain minerals. These include tin, tantalum, tungsten, and gold.

The use of these minerals in the electronics industry is widespread, but their extraction is sometimes associated with serious human rights violations. As an EMS provider, ATP Elektronik GmbH does not directly source these metals; however, they may be present in the materials and components we procure. Therefore, we are committed to responsible sourcing and have taken measures to reduce the risks associated with conflict minerals in our supply chain:

- **Trusted Suppliers:** We collaborate exclusively with manufacturers and authorized dealers who share our ethical values and are committed to tracing conflict minerals and ensuring transparency in their supply chains.
- **Customer Policies:** We strictly adhere to our customers' specifications regarding bill of materials and components. Any changes to these specifications are only made in justified exceptional cases and with explicit customer consent.
- **Transparency:** We utilize available resources such as "Conflict Minerals Reporting Templates" (CMRTs) to provide transparency about the origins of minerals. These templates are provided by many manufacturers on their websites and can be accessed at <https://www.ecianow.org/member-company-information>.

We recognize that tracing conflict minerals in the supply chain presents a complex challenge. Nevertheless, through these measures, we aim to continuously reduce the risks associated with conflict minerals. Our goal is not only to comply with legal requirements but also to actively contribute to a responsible and ethical electronics industry. Should you have any questions about our initiatives or require further information, we are always at your disposal.

Sincerely,

ATP Elektronik GmbH
